

The controversy: are we created?

Controversy?

I suppose the controversy is: who made us: random or God? There has been an argument for thousands of years. There will be arguments for a thousand more if we dare. Can a book be so powerful to dictate our view? Didn't a man make this book called the Bible or Quran? Why are we fighting over creation and God if it all is ridicules? I believe it is because nothing happens by accident.

People meet under suspicious circumstances. Why are twins usually alike even when they are born apart? Deja vu is not real right? Something's are just plain evil. Why must we avoid the truth most of the time? Why is something written in stone such a pain to so many people. Dog eat dog world: how about human eat human world. There seems to be a uniformed struggle to be number one, recognized, and the best. Why can't people just get along? In the Bible it says people are born with an evil nature that only God can turn towards good. In this world is that so ridicules?

Maybe God did make us to give space meaning. Maybe God considers you worth it. Is it so hard to believe that you matter? Certainly random does not care about you. Did man really make a Holy Book to guide us to be good? Is it working? Think about it: if things don't just fly apart then maybe something holds it together. Is random so much more plausible than a God who cares? The controversy is that we hope anything but God did it. Why is that the truth we all seek?

Maybe?

Many people say that there is only one question in the Bible "Do you believe in Jesus." That is a valid statement but there is another. If you don't believe the first verse in the Bible then the rest is nonsense. There are 31,102 verses in the whole Bible. If you include the Catholic

Apocrypha you get a whole lot more. From within all those verses we could consider anyone of those verses the most important. John 3:16 is in many ways considered the best verse but is it? What are the most burning questions about creation?

The reason I chose Genesis 1:1 **“In the beginning God created the heavens and the earth”** as the most important verse is really simple: if you don’t believe in that one nothing else matters. If God didn’t do it then Jesus didn’t do it either. The angels don’t exist and Darwin was right. The whole argument about God is really: does he exist? If he does then he created us. If he does not then we should be living with our monkey’s uncle. Genesis 1:1 puts your belief on the line.

Maybe God created all things? Maybe it was a big bang theory and the rest is history. Maybe we are products of aliens? The “maybe” can have a few questions. Does it seem reasonable that everything began from something? Can you create something from nothing? That seems easy but is it. Where did aliens come from, or the physical matter for a big bang theory? For that matter where did God come from? Can something always exist? The answer might be “Maybe or maybe not” to all those questions.

Yes?

How about the answer: yes God did it. The Bible is really old. The writing comes from a beginning period of about 4000 years ago. Some smart people dispute that while others say that writing did not even exist then, but we have had the Book of Genesis for quite a while anyways. Why are there several types of creation stories like the Egyptian one or the Babylonian account called “The Enuma Elish.” This version is similar and not similar to the Bible account. The Bible says God did it. The others talk about God like wars or soap operas that created this world.

Most of the problem comes down to data. We have very little data about creation. There are about 700 hundred words in the Bible on creation. For creation argument we could have used 700 more. I like visual data instead. If this world is random then why is everything uniformed? We usually have two of this and that. Why only one heart in all things? Why doesn't the moon go on its own course? Why does everything follow gravity rules? If it is all random then where is the random? Progression from monkeys is still from one place to another. The random thought of just being created in 7 days seems so random.

Why do we have different Gods all over the world? Why has the Jewish God caused wars, fights, and arguments? If God is not real then it seems reasonable that the fight is stupid isn't it? Could an argument on creation last for over 4000 years? In the mirror it seems that humans are vastly different than other things. How can random make a bug and a human with two eyes, yet we don't have a one eyed bird that is different than bugs and humans. Uniformed creation seems possible in a uniformed world we live in. Maybe yes God did it.

No?

What if the answer is no: God did not create things. I like the answer that creation a big waste of space. Rocks and dust just randomly flout around the universe. Where did the universe come from? Did you know that the way the sun works with chemical reaction and pressure is the same in the earth and within us. There is an equal balance so that things don't explode. That though lends towards we came from other things in space because there are similar chemicals and processes.

Man is in space looking for things that don't exist here on earth. He ain't found it yet. He has however found all the building blocks we have here on earth to create life. There is hydrogen, oxygen, and carbon in space. I suppose within such a big universe the odds of one

planet being in the right spot to produce life is pretty good or pretty bad. We are in a good place as the planet earth (lucky us). Maybe we breathe air because air is what we have. Maybe we live on water because we have water. Will they find creatures on mars that exist on different chemicals? They have not yet, but they are willing to spend billions looking.

There is no way a God did it. Why won't he show himself? They say he is a good God. Where is the good in this seemingly evil world? Random selection from Darwin seems so cold, uncaring, and unimportant on this rock called earth. If Darwin is bang on then the big bang is boom and not bust. We live for today because tomorrow we die. We are meaningless to this vast universe that considers randomness perfection.
